- InTM Film：Transparent retransfer film
- Compatible with PVC, composite PVC, PET, ABS, etc
- Each roll coats 500 printing surfaces(ISOCR80(53.98mm×85.60mm))

1、Product overview

Seaory R series card printer retransfer film-InTM Film consists of transparent film and registration marks and is used with other color ribbons such as YMCK for printing. As the temperature of the print head increases, the solid pigment (ribbon) will be directly converted into gas and sprayed onto the surface of the retransfer film, and then the retransfer film will be attached to the card surface at high temperature.

Based on the above principle, the Ultra-edge printing of the card can be achieved. To maximize the quality of the printed card and the durability of the card printer, please use the original Seaory retransfer film.

2、Main features

● **Durability and excellent print quality**

The retransfer film on the surface of the card can be anti - oxidation discoloration, fading, waterproof, anti - fingerprint and other functions.

● Security

Seaory R series full-panel YMCK ribbon will not be able to be color printed again after PVC card printed text, barcode and images and covering the surface retransfer film overlay. This way can prevent card information from being tampered.

3、Specifications

Category	Specification	Note
Applicable models	R series card printers	
Capacity	500 prints /roll	ISO CR80
Compatible cards	PVC or composite PVC	
Part Number	BXR.R0106.XXX	
Gross Weight	216g	
Packing size	227mm × 148mm × 70mm
